IT's all about a NEW concept

IT Analyzer changes the way IT is delivered by providing a clear view to a more complete service management by simplifying every aspect of your IT service with a singular focus on increasing time-to-value. Our main primary mission is to change the way IT delivers by simplifying every aspect of your IT service with a singular focus on increasing time-to-value.

ANALYTICS MANAGEMENT SERVICES

With this new level of visibility and understanding, IT Management can confidently make fact-based decisions to align with business priorities and support future business growth. IT Analyzer enterprise version focuses on increasing time-to-value, and gives the IT manager the visibility and control to manage business demands and respond to change. IT Analyzer enables IT organizations to capture and organize IT resource measurements from multi-vendor, heterogeneous IT infrastructures and analyze this information to create utilization, availability, performance and capacity intelligence for those resources.

THE TIME FOR A NEW APPROACH...

Enterprise IT management is at an inflection point, the current operational paradigm must evolve to a more strategic and business-oriented one, helping IT Managers to operate "IT-as-a-business". Legacy IT management tools are tactical and operate in isolated "silos", focused on monitoring, control & governance. As IT infrastructure complexity is growing exponentially, IT Managers cannot see the "forest from the trees".

Technology that work's for you

IT Analyzer deals with the IT management and operational complexity pain by gathering information from the IT Infrastructure objects and layers and storing it into a so-phisticated analytical rules BI cube that combs knowledge and best practices.

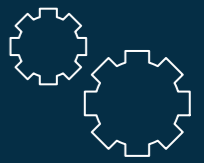

IT Analyzer analyzes "weak links" and reconfiguration in the IT layer, and by that we Improve the IT infrastructure stability, reduce errors, alerts, downtime,

and human intervention. IT Analyzer supports IT managers to perform in a dynamic environment. The system collects & translates massive IT infrastructure Data into "actionable information" enabling CIO & IT Management to make fast and accurate decisions using the unique

Business Intelligent analysis engine as a layer on top of exist-ing management tools.

IT Analyzer SOLUTIONS

Measure & Correlate IT Infrastructure

IT Analyzer 'collect, centralize, standardize, normalize, aggregate and correlate IT-related information from Multiple sources of heterogeneous and Multi Vendor IT Infrastructure assets and services as Storage Arrays, FC-switches and directors, physical and virtual servers, Blade Systems, backup services, data replication and DR Systems.

Data and Service Risk Mitigation

IT Analyzer 's unique approach, provides an in-depth view of resources and data allocation with the ability to identify potential data protection and service availability potential risks by applying proactive activities, implementing analytical rules based on sophisticated policies and scenarios.

Optimization and Cost Reduction

IT Analyzer's unique approach, optimizes the IT Infrastructure resources by Analyzing and binding End-To-End applications or services into related underlining hardware and software Infrastructure objects, ensuring delivery of functional business value and identifies orphans, leftovers, unused resources and configuration issues.

Infrastructure Analysis

IT Analyzer applies Analytic rules on the information gathered in order to generate new information that helps the IT Executives, IT Management and Decision Makers to review and monitor a correlated and integrated view of theIT Infrastructure changes, trends and anomalies.

Forrester Research, Inc "...the IT management software market will have to evolve from its pure operational role to a more strategic and business-oriented one."
